# Mr. GoodTower® Se

## Extend the Life of Your Unit

- ✓ Receive a comprehensive unit inspection to identify any issues or problems before they turn into a disaster.
- ✓ Remove corrosion, fix leaks and refurbish the interior surfaces.
- ✓ Replace old, corroded, worn coil sections overall.

## Improve Thermal Performance

- ✓ Install new and more efficient fill or and replacement coil bundles for better thermal performance.
- ✓ Professionally designed custom counterflow & crossflow fill kits.
- ✓ Install new water distribution systems and recirculating pumps to provide better coverage over the fill or coils.
- ✓ Install new fan motors, sheaves, and fans to provide more airflow.

## Eliminate Problems

- ✓ Replace old and worn shafts, bearings and wheels **prior** to failure. Emergency replacements can result in expensive repairs and unscheduled equipment down time.
- ✓ Dramatically reduce operating sound with EVAPCO Low Sound Fan solutions.
- ✓ Install new filtration equipment to reduce fouling in the equipment being serviced by the evaporative cooling equipment.
- ✓ Eliminate the potential for liquid spills by converting to a Smart Shield® Solid Chemical Water Treatment System.

## Reduce Maintenance Costs

- ✓ Install motor davits, ladders and service platforms to reduce labor hours by providing easier access to high maintenance areas of the evaporative cooling unit.
- ✓ Install electric water level controls to eliminate the expense associated with leaking mechanical make-up valves.
- ✓ Provide a service contract to perform all the routine maintenance as recommended by the evaporative cooling equipment manufacturer.
